

ABSTRACT

An unsoiled diaper having a reduced volume restrained within an encasement is provided
5 as a packaged diaper that is conveniently configured for carrying and storing. The encasement
may be an air impermeable vacuum-sealed encasement having the diaper compressed therein by
a pressure differential acting across the encasement. A single diaper may be disposed within the
encasement and the packaged diaper may be configured to be pocketable for convenient and
discreet carriage.
